

Elering AS Price List for the Connection of Consumption and/or Generation Capacity or for the Amendment of Consumption and/or Generation Conditions, effective as of 31.07.2025.

Notes:

Attention! The amounts indicated in the price list are subject to value added tax (VAT) in accordance with the law.

The technical solutions of the substations are described in the guideline “Technical Principles and Solutions for Electrical Installations of the Transmission System Operator” as a part of Elering AS Terms and Conditions for Connecting to the Electricity Transmission System.

All existing 110 kV substations of the transmission system operator are grouped in the price list as follows:

- Type A existing 110 kV substation – 110 kV substations with one or two sections, including run-through and H-scheme substations;
- Type B existing 110 kV substation – 110 kV substations with dual-systems, including the 110 kV switchyards of 330/110 kV substations.

*- Maximum outage restoration time for the consumption point.

No.	Description	Fee	Unit
1.	Network hardening fee		
1.1.	Transmission capacity enhancement fee at 330 kV voltage	12 000	euros/MVA
1.2.	Transmission capacity enhancement fee at up to 110 kV and at 110 kV voltage	65 000	euros/MVA

2.	Connection creation fee		
2.1.	at ≤ 110 kV voltage		
2.1.1.	Construction of a new 110 kV connection point (capacity ≤ 100 MVA) in an existing extendable 110 kV substation (Type A), 120 h*	883 358	euros
2.1.2.	Construction of two new 110 kV connection points (consumption site capacity ≤ 200 MVA) in an existing extendable 110 kV substation (Type A), 120 h* (2 h* implementation to be specified with the Transmission System Operator)	1 766 716	euros
2.1.3.	Construction of a new 110 kV connection point (capacity ≤ 100 MVA) in an existing extendable 110 kV	1 091 358	euros

	substation (Type B), 120 h*		
--	-----------------------------	--	--

2.1.4	Construction of two new 110 kV connection points (consumption site capacity $\leq$ 200 MVA) in an existing extendable 110 kV substation (Type B), 2 h*	2 182 716	euros
2.1.5	Construction of a new 110 kV (single-line, run-through scheme) substation on an existing 110 kV overhead line for a single new 110 kV connection point (capacity $\leq$ 50 MVA) (technical solution does not apply to cable or mixed lines, nor for an additional connection point), 120 h*, of which:	1 890 425	euros
2.1.5.1	<i>cost of constructing a 110 kV connection point, including the 110 kV bay and associated systems</i>	571 000	euros
2.1.5.2	<i>other substation construction-related costs, including 2 line entries, 2 line bays, control building, and land plot</i>	1 319 425	euros
2.1.6.	Construction of a new 110 kV (two-section) substation on an existing 110 kV transmission line (overhead, cable, or mixed line) for a new 110 kV connection point (capacity $\leq$ 100 MVA), 120 h*, of which:	2 622 025	euros
2.1.6.1	<i>cost of constructing a single 110 kV connection point, including the 110 kV bay and associated systems</i>	513 000	euros
2.1.6.2	<i>other substation construction-related costs, including 2 line entries, 2 line bays, control building, and land plot</i>	2 109 025	euros
2.1.6.3	<i>each additional new 110 kV connection point (capacity $<$ 100 MVA), 120 h*, including the 110 kV bay and associated systems (2 h* implementation to be specified with the Transmission System Operator)</i>	513 000	euros
2.1.6.4	<i>each additional new 110 kV line entry, including the 110 kV line bay and associated systems</i>	618 000	euros
2.1.7	Increasing the consumption and/or generation capacity of an existing up to 110 kV connection point in an existing substation to a level above 15 MVA up to 100 MVA (incl.).	9 000	euros
2.1.8	Increasing the consumption and/or generation capacity of an existing up to 110 kV and 110 kV connection point in an existing substation to a level above 15 MVA up to 100 MVA (incl.).	22 447	euros
2.1.9	Adding power quality measurement to an existing connection point at 110 kV, in cases where a Class D generating unit is connected to the connection point(s) via a power transformer owned by the distribution system operator or the transmission system operator, or when the total installed maximum capacity of generating units meets or exceeds the Class D threshold (15 MW).	29 080	euros
2.1.10	Upgrading an existing connection point in an existing substation from up to 110 kV to 110 kV.	258 000	euros
2.1.11	Construction of a new 110 kV line bay in an existing extendable 110 kV substation (Type A substation).	1 006 358	euros
2.1.12	Construction of a new 110 kV line bay in an existing extendable 110 kV substation (Type B substation).	1 110 358	euros

Connection creation fee			
2.2.	at 330 kV voltage		
2.2.1.	Construction of one new 330 kV connection point with a simplex bay (capacity ≤ 400 MVA) in an existing extendable 330 kV substation, 120h* (<i>feasibility and capacity limit for the specific substation to be specified with the Transmission System Operator</i>).	2 608 358	euros
2.2.2.	Construction of a new 330 kV connection point (capacity ≤ 400 MVA) in an existing extendable 330 kV substation (Type B), 120 h*	4191 358	euros
2.2.3.	Construction of a new 330 kV (single-line, run-through scheme) substation on an existing 330 kV overhead line for a single new 330 kV connection point (capacity ≤ 100 MVA) (technical solution does not apply to cable or mixed lines, nor for an additional connection point), 120 h*, of which:	6 282 525	euros
2.2.3.1	<i>cost of constructing a 330 kV connection point, including the 330 kV bay and associated systems</i>	1 636 000	euros
2.2.3.2	<i>other substation construction-related costs, including 2 line entries, 2 simplex line bays, control building, and land plot</i>	4 646 525	euros
2.2.4.	Construction of a new 330 kV (duplex scheme) substation on an existing 330 kV overhead line for a new 330 kV connection point (capacity ≤ 400 MVA), 120/2 h* depending on the number of connection points, of which:	9 326 525	euros
2.2.4.1	<i>cost of constructing a single 330 kV connection point, including the 330 kV simplex bay and associated systems</i>	1 636 000	euros
2.2.4.2	<i>other substation construction-related costs, including 2 line entries, 2 duplex line bays, control building, and land plot</i>	7 690 525	euros
2.2.4.3	<i>additional new 330 kV connection point with a simplex bay (capacity ≤ 400 MVA), 2h*, (feasibility to be specified with the transmission system operator).</i>	1 636 000	euros
2.2.4.4	<i>each additional new 330 kV connection point with a duplex bay (capacity ≤ 400 MVA), 120h or 2h*</i>	2 728 000	euros
2.2.4.5	<i>each additional new 330 kV duplex line bay and its associated systems</i>	3 125 000	euros
2.2.5.	In an existing substation, increasing the consumption and/or generation capacity at an existing 330 kV connection point (simplex bay) (<i>feasibility and capacity limit to be specified with the transmission system operator</i>)	60 788	euros
2.2.6.	In an existing substation, increasing the consumption and/or generation capacity of an existing 330 kV connection point (duplex bay) up to 400 MVA (incl.)	111 586	euros

2.2.7	Construction of a new 330 kV duplex line bay in an existing extendable 330 kV substation.	4 214 358	euros
-------	---	-----------	-------

3.	Fee for increasing supply reliability		
3.1.	Construction of a new transmission line	Based on actual costs	
3.2.	Fee for the construction of substation line bays according to the voltage level, items 2.1 or 2.2	Based on the price list	

4.	Fee for connecting to the transmission system outside the transmission system		
4.1.	Fees under items 1 and 2 according to the voltage level, and fees under items 3 and 5 to 7	Based on the price list	
4.2.	Construction of a new transmission line	Based on actual costs	
4.3.	Cost of the line bays required for connecting a new transmission line and the associated new substation, according to the voltage level, see items 2.1 or 2.2	Based on the price list	

5.	Project management fee		
5.1.	The project management fee is added on top of the fees listed in items 1 to 4.	2.53%	

6.	Transaction fee		
6.1.	Connection of a consumer or a distribution system operator at a new connection point or the amendment of consumption and/or generation conditions at an existing connection point of a distribution system operator or the amendment of consumption conditions at an existing connection point of a consumer	4 200	euros
6.2.	Connection of a generating unit or a mixed installation to the transmission system or amendment of generation and/or consumption conditions thereof	12 800	euros

7.	Processing fee		
7.1.	Connection of a consumer or a distribution system operator at a new connection point or the amendment of consumption and/or generation conditions at an existing connection point of a distribution system operator or the amendment of consumption conditions at an existing connection point of a consumer	3 200	euros
7.2.	Connection of a generating unit or a mixed installation to the transmission system or amendment of generation and/or consumption conditions thereof	4 000	euros
